

Internship Business Development (m/f)

Would you like to get to know the work and development of a deep tech startup from Düsseldorf and actively help shape it?

Who we are: We develop AI-based software solutions in the field of robotics and thus support companies in automation technology.

Who we are looking for: You are fully integrated into our friendly team and have the opportunity to contribute your own ideas and turn them into reality. During your work challenging tasks will be transferred directly to you and you will support us in current projects. If you work solution-oriented and have fun with the topics AI & robotics, you came to the right place!

Your profile

- Advanced studies (preferably industrial engineering, natural or engineering sciences, business administration, economics)
- You have a customer-oriented, structured and independent way of working.
- You are strong in implementation and have very good MS-Office skills (Excel, Word, PowerPoint).
- You are able to prioritize different tasks and work on several topics at the same time.
- You are pragmatic and want to implement your own concepts and ideas.
- You are highly motivated and want to take on responsibility.

Your tasks

- Carrying out market and competition analyses
- Derivation of customer requirements and growth potential
- Development of formats and channels for addressing customers
- Conducting customer surveys on product development
- Support in setting up the internal company knowledge management system
- Support of project and day-to-day business

What we offer

- An exciting field of activity with personal responsibility and creative scope for creativity
- Supervision of own projects with the possibility of permanent employment or other forms of further employment
- Real startup experience in a friendly team in a modern office in Düsseldorf

Start: Immediately for 3-6 months

Location: Düsseldorf
